

Assignment 0519

1

You are preprocessing a dataset containing metadata annotations. You are given a string S of length N consisting of lowercase English letters, commas `,`, and quotation marks `"`. It is guaranteed that S contains an even number of `"`.

Let $2K$ be the total number of `"` in S . For each $i = 1, 2, \dots, K$, the characters situated between the $(2i - 1)$ -th `"` and the $(2i)$ -th `"` are considered to be "enclosed" metadata.

Your task is to sanitize the string by replacing each comma `,` in S that is **not** enclosed in quotation marks with a period `.`, and then print the resulting string.

Constraints:

- $1 \leq N \leq 1000$
- S is a string of length N consisting of lowercase English letters, `,`, and `"`.
- S contains an even number of `"`.

First, you will receive the length of the string, and then you will receive the string itself on the next line.

The input format is fixed, so you do not need to make it interactive (i.e., do not print instructions like "input the number" or "input the string").

Example 1:

```
8
"a,b"c,d
```

Answer 1:

```
"a,b"c.d
```

Example 2:

```
20
a,"t,"c,"o,"d,"e,"r,
```

Answer 2:

a."t","c."o,"d."e,"r.

2

Write a C program that receives a 3×3 matrix and swaps two specified rows. **Crucially, you must implement the swapping logic entirely using pointer operations, not by using standard array subscript syntax like `A[i][j]` .**

Format

You will first receive the indices of the rows to swap, i and j ($1 \leq i, j \leq 3$). The next three lines will contain the 3×3 matrix.

Output the matrix where the i -th row and j -th row are swapped.

Example Input

```
1 2
1 2 3
4 5 6
7 8 9
```

Example Output

```
4 5 6
1 2 3
7 8 9
```

How to submit

Save your source code file in the form of

`[StudentID]_A[Assignment Number]_P[Problem Number].c` . For example, for assignment 10 problem 2, save it as `1W21CS08_A0519_P02.c` . Submit only the source code files.

Create a document for problem 1 in any easily readable format (PDF, Word, etc.) Name it in the same way except keeping the original file extension. For example, if you want to submit a PDF file, submit `1W21CS08_A0519_P01.pdf` .
